DOMAIN EVENT

TURBO TRIVIA

“Where Machines Meet Minds”

Introduction:

This event will center around the theme of “Mechanical Quest: Mastering Machines, Systems, and Components.” Open to participants from all departments, this event focuses on enhancing and testing the participant’s knowledge of automotive and mechanical parts, their functions, and assembly. It creates an engaging and competitive environment where participants must sharpen their skills across different mechanical scenarios. It pushes participants to think practically about real-world automotive systems.

Objective:

The objective of this event is:

- Test participants’ knowledge of automotive parts by recognizing them from drawings.
- Engage participants in identifying the function of these parts under time pressure.
- Challenge participants to assemble a basic mechanical system diagram correctly.

EVENT DESCRIPTION:

Round 1: Archer Accuracy

Participants are provided with a rubber band and a small piece of paper. They must use their fingers to create a makeshift slingshot, with the paper acting as a projectile. The goal is to launch the paper at a target made of cardboard, which is marked with different point zones. Where the projectile lands determines the points awarded. Participants will have 3 attempts to score as many points as possible. The challenge lies in using simple materials in a strategic way, requiring precision in aiming and consistent hand-eye coordination to achieve maximum points.

Round 2: “Flash Card Function”

Participants are shown a series of flashcards, each displaying a clear image of a mechanical part, such as a crankshaft, carburetor, or fuel injector. One by one, each participant must describe the function of the part shown, using simple yet accurate technical explanations within a time limit of 1 minute and 30 seconds.

For example, if shown a spark plug, the participant must respond with a concise description like “initiates combustion in the engine cylinder.” Participants are awarded points for each correct answer, and vague or incorrect descriptions are not accepted.

As the round progresses, participants must continue describing the functions of various parts, with the challenge intensifying as less commonly known parts are introduced, ensuring only those with strong knowledge advance to the final round.

Round 3: “Build-a-Beast: Dream Car On Budget”

Unleash your inner automobile designer in Build Your Dream Car! With a fixed budget and a wide catalog of components, participants must create their ideal car by strategically selecting engines, drivetrains, safety features, and more with a fixed time limit of 45-60 minutes.

Whether you craft a luxury cruiser, a rugged off-roader, or a budget performance beast, your choices must balance innovation,

performance, and practicality. Submit your design with a cost breakdown and purpose justification. The top entries will be judged on creativity, technical soundness, budget efficiency, and alignment with their intended use. Think smart, build wise, and drive your vision to victory!

Judgement Criteria

Round 1:

- Accuracy in hitting the target.
- Number of points scored based on where the projectile lands according to colours.
 - GREEN- 50
 - YELLOW- 40
 - RED- 20
 - BLUE-10

Round 2:

- Accuracy of each part's function identified
- Number of correct answers within the time limit

Round 3:

- Budget efficiency: Is the car well-balanced within the budget?
- Purpose alignment: Is the car well-suited for its stated purpose?
- Creativity and Innovation
- Practicality and realism
- Feature integration
- All technical aspects will be evaluated based on a pre-defined threshold.

Potential Judges:

Faculties of Department of Mechanical Engineering of SRM.

Incentives:

Participation Certificates will be provided to all, and cash prizes will be awarded for 1st, 2nd, and 3rd placed participants.

Pros:

- Accessible to students from any branch or department.
- Develops quick thinking, mechanical knowledge, and visual skills.
- Engaging and educational with real-world relevance.

Cons:

- Some parts may be too technical for complete beginners.
